1 Introduction

The application shall allow users to maintain their own login account and would allow the user to set their privacy levels according to their convenience. As the user logs in to their respective accounts, the application would not only provide the users with the appropriate posts of travel diaries but it will also enable them to upload their experiences in the specific travel diary they intend to. Moreover, they can share their experiences along with their geo-tagged photos on the platform and would help out people in deciding a destination.

2 Studies for Requirements gathering

- Brainstorming for taking up an idea and contributing to the idea already taken up.
- Conducting efficient surveys to capture all aspects of user functional requirements.

3 Functionalities achieved

- User can be able to add a diary with Geo-Tagged photos.
- Follow a particular person or follow a diary.
- Search for a particular diary or a person.

4 Technical Functionalities

- The application does not store any data on the operating device. All the data is stored on the server.
- The application can be opened via an .apk that runs on an Android Device.
- A location can be searched and all the diaries at that will be displayed on a specified name.
- The User can set their privacy levels according to their convenience.

5 Unanticipated Problems

- The only problems faced were during integration and testing.
- The lack of communication during the vacations caused us to lag behind the schedule and the work had to be done faster from that point onwards.

6 Project was Terminated due to

- All the proposed functionalities were met.
- Bugs were removed.
- The application has been tested.
